# UML Diagram Types Guide: Learn About All Types of UML Diagrams with Examples

Updated on: 28 September 2022 | 5 min read

UML stands for **Unified Modeling Language**. It's a rich language to model software solutions, application structures, system behavior and [business processes](https://creately.com/blog/diagrams/importance-of-business-process-modeling/) (<https://creately.com/blog/diagrams/importance-of-business-process-modeling/>). There are **14 UML diagram types** to help you model these behaviors.

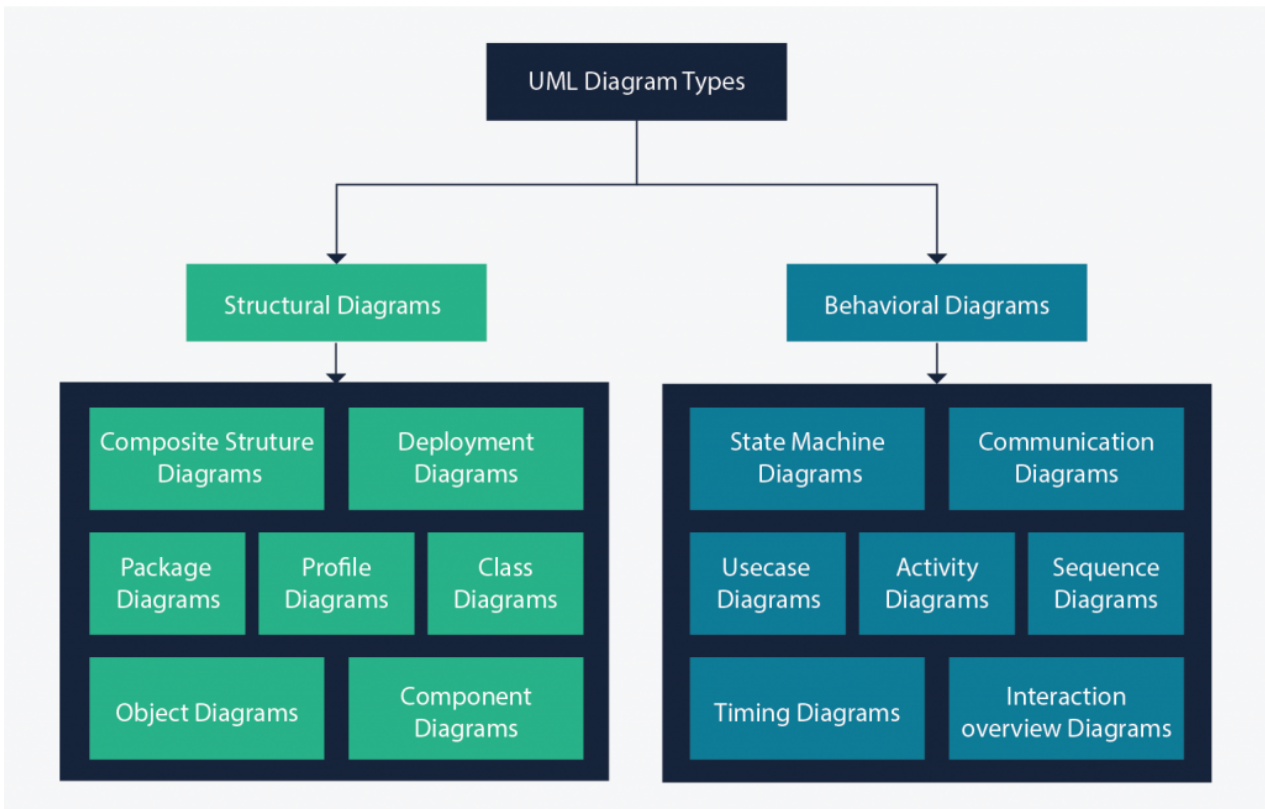

You can [draw UML diagrams online](https://creately.com/lp/uml-diagram-tool/) (<https://creately.com/lp/uml-diagram-tool/>) using our software, or check out some [UML diagram](https://creately.com/diagram-type/templates/uml-diagram/) (<https://creately.com/diagram-type/templates/uml-diagram/>) examples at our diagramming community.

## List of UML Diagram Types

So what are the different UML diagram types? There are two main categories; **structure diagrams** and **behavioral diagrams**. Click on the links to learn more about a specific diagram type.

- Structure Diagrams
  - [Class Diagram](#)
  - [Component Diagram](#)
  - [Deployment Diagram](#)
  - [Object Diagram](#)
  - [Package Diagram](#)
  - [Profile Diagram](#)
  - [Composite Structure Diagram](#)

- Behavioral Diagrams
  - Use Case Diagram
  - Activity Diagram
  - State Machine Diagram
  - Sequence Diagram
  - Communication Diagram
  - Interaction Overview Diagram
  - Timing Diagram

**Structure diagrams** show the things in the modeled system. In a more technical term, they show different objects in a system. **Behavioral diagrams** show what should happen in a system. They describe how the objects interact with each other to create a functioning system.

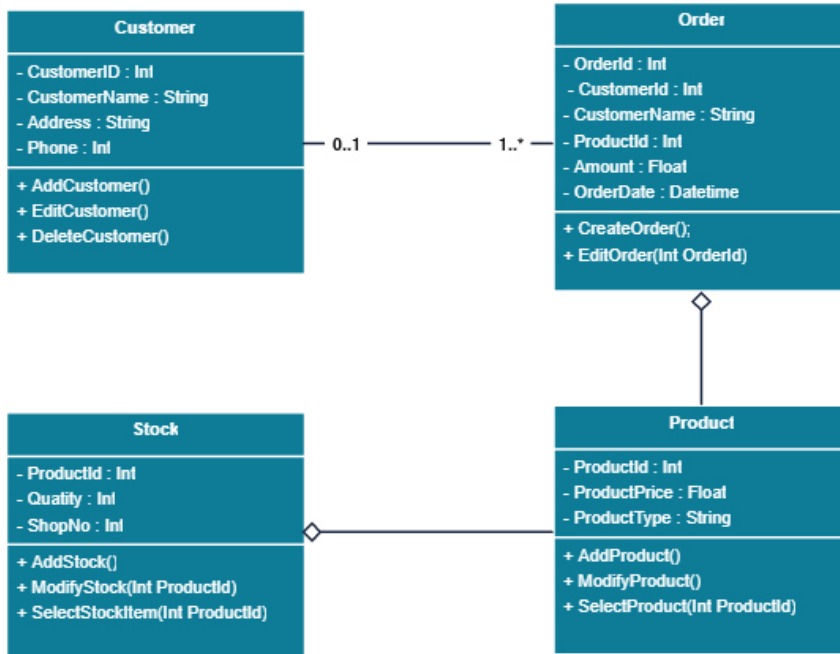

## Class Diagram

Class diagrams are the main building block of any object-oriented solution. It shows the classes in a system, attributes, and operations of each class and the relationship between each class.

In most modeling tools, a class has three parts. Name at the top, attributes in the middle and operations or methods at the bottom. In a large system with many related classes, classes are grouped together to create class diagrams. Different relationships between classes (<https://creately.com/diagram-type/article/relationships-that-exist-between-classes>) are shown by different types of arrows.

Below is an image of a class diagram. Follow the link below for more class diagram examples or get started instantly with our [class diagram templates](https://creately.com/diagram-type/templates/class-diagram) (<https://creately.com/diagram-type/templates/class-diagram>).

## Component Diagram

A [component diagram](https://creately.com/diagram-community/popular/t/component-diagram) (<https://creately.com/diagram-community/popular/t/component-diagram>) displays the structural relationship of components of a software system. These are mostly used when working with complex systems with many components. Components communicate with each other using [interfaces](http://en.wikipedia.org/wiki/Interface_(object-oriented_programming)) ([http://en.wikipedia.org/wiki/Interface\\_\(object-oriented\\_programming\)](http://en.wikipedia.org/wiki/Interface_(object-oriented_programming))). The interfaces are linked using connectors. The image below shows a component diagram.

## Deployment Diagram

A [deployment diagram \(https://creately.com/blog/diagrams/deployment-diagram-tutorial/\)](https://creately.com/blog/diagrams/deployment-diagram-tutorial/) shows the hardware of your system and the software in that hardware. Deployment diagrams are useful when your software solution is deployed across multiple machines with each having a unique configuration. Below is an example deployment diagram.

## Object Diagram

Object Diagrams (<https://creately.com/lp/object-diagram-tool/>), sometimes referred to as Instance diagrams are very similar to class diagrams (<https://creately.com/blog/diagrams/class-diagram-tutorial/>). Like class diagrams, they also show the relationship between objects but they use real-world examples.

They show what a system will look like at a given time. Because there is data available in the objects, they are used to explain complex relationships between objects.

## Package Diagram

As the name suggests, a package diagram shows the dependencies between different packages in a system. Check out [this wiki article \(http://en.wikipedia.org/wiki/Package\\_diagram\)](http://en.wikipedia.org/wiki/Package_diagram) to learn more about the dependencies and elements found in package diagrams.

(<https://creately.com/demo-start/?templd=ikzewso01>).

## Profile Diagram

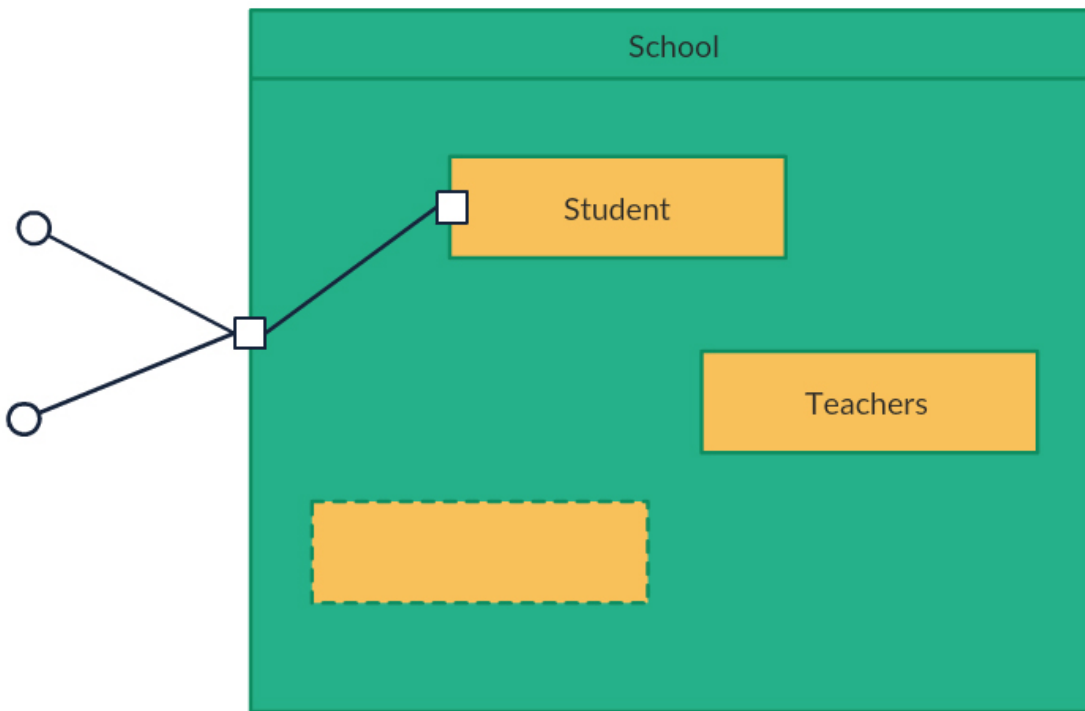

Profile diagram (<https://creately.com/diagram/example/j6dbkbqz2/profile-diagram>) is a new diagram type introduced in UML 2. This is a diagram type that is very rarely used in any specification. For more profile diagram templates, visit our [diagram community](https://creately.com/diagram-community/all?term=Profile%2520Diagram) (<https://creately.com/diagram-community/all?term=Profile%2520Diagram>).

(<https://creately.com/demo-start/?templd=j6dbkbqz2>).

## Composite Structure Diagram

Composite structure diagrams are used to show the internal structure of a class. Some of the common [composite structure diagrams](https://creately.com/diagram-community/all?term=composite) (<https://creately.com/diagram-community/all?term=composite>).

(<https://creately.com/demo-start/?templd=j5xitro2>)

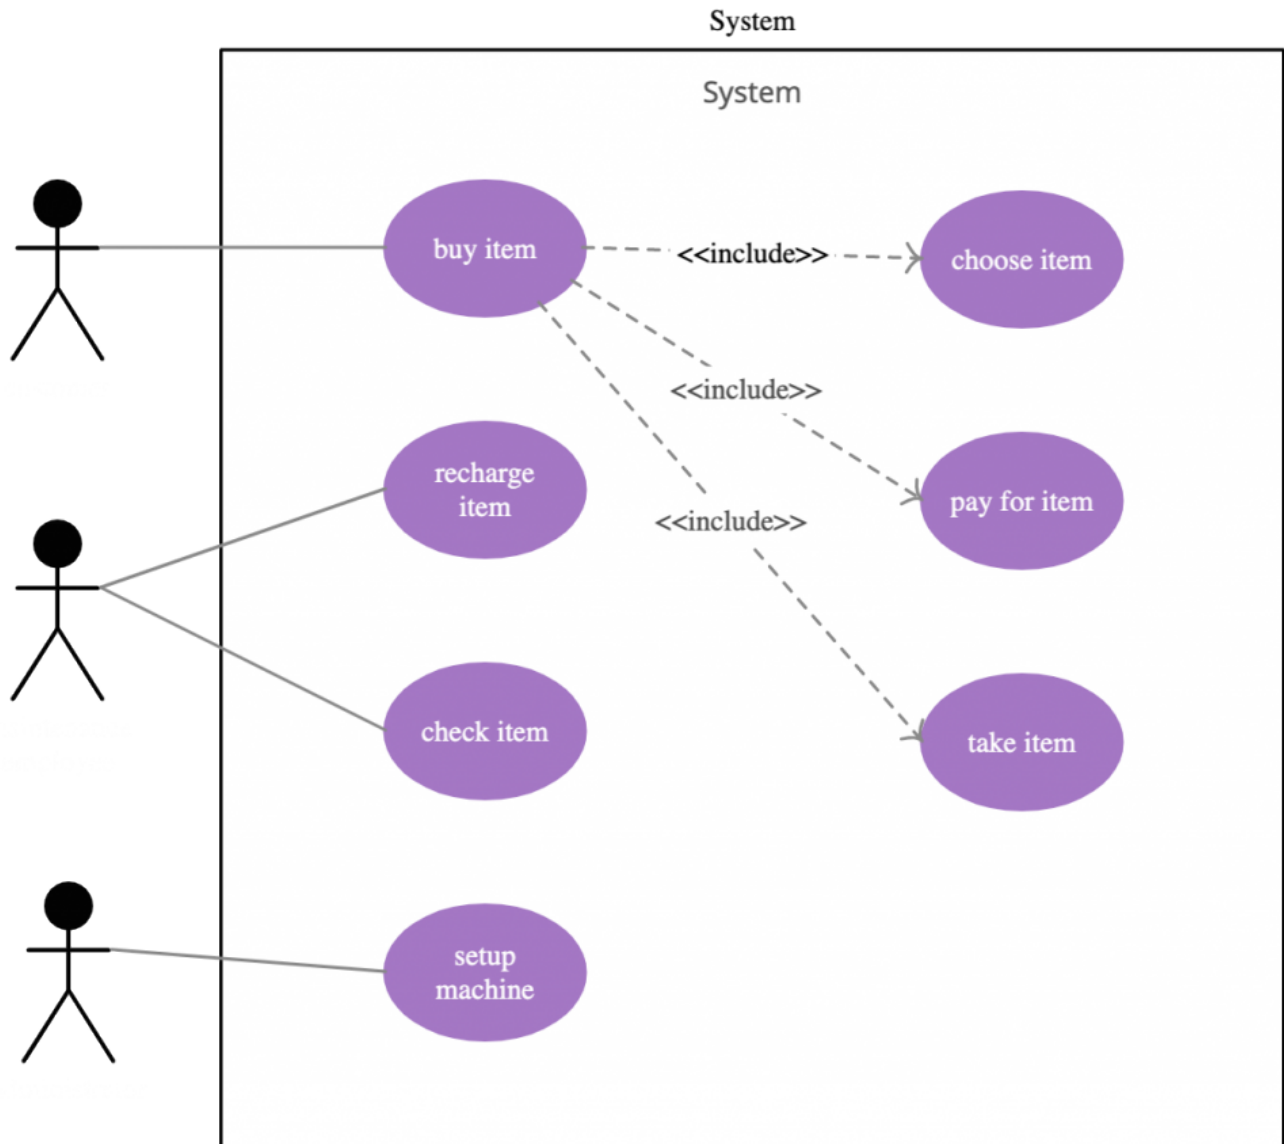

## Use Case Diagram

As the most known [diagram type](https://creately.com/blog/diagrams/which-diagram-to-use/) (<https://creately.com/blog/diagrams/which-diagram-to-use/>) of the behavioral UML types, [Use case diagrams](https://creately.com/diagram-community/popular/t/use-case) (<https://creately.com/diagram-community/popular/t/use-case>) give a graphic overview of the actors involved in a system, different functions needed by those actors and how these different functions interact.

It's a great starting point for any project discussion because you can easily identify the main actors involved and the main processes of the system. You can [create use case diagrams](https://creately.com/diagram-type/use-case) (<https://creately.com/diagram-type/use-case>) using our tool and/or get started instantly using our [use case templates](https://creately.com/blog/examples/use-case-templates-uml/) (<https://creately.com/blog/examples/use-case-templates-uml/>).

## Activity Diagram

Activity diagrams represent workflows in a graphical way. They can be used to describe the business workflow or the operational workflow of any component in a system. Sometimes [activity diagrams](https://creately.com/diagram-community/popular/t/activity-diagram) (<https://creately.com/diagram-community/popular/t/activity-diagram>) are used as an alternative to State machine diagrams. Check out this wiki article ([http://en.wikipedia.org/wiki/Activity\\_diagram](http://en.wikipedia.org/wiki/Activity_diagram)) to learn about symbols and usage of [activity diagrams](https://creately.com/lp/activity-diagram-tool/). (<https://creately.com/lp/activity-diagram-tool/>) You can also refer this [easy guide](https://creately.com/blog/diagrams/activity-diagram-tutorial/) (<https://creately.com/blog/diagrams/activity-diagram-tutorial/>) to activity diagrams.

### State Machine Diagram

State machine diagrams (<https://creately.com/lp/state-machine-diagram-tool/>) are similar to activity diagrams, although notations (<https://creately.com/lp/state-machine-diagram-tool/>) and usage change a bit. They are sometimes known as state diagrams

(<https://creately.com/diagram/example/h1xtnwwh1/New%20Facebook%20Login%20Activity%20Diagram>) or state chart diagrams (<https://creately.com/diagram-community/popular/t/state-chart>) as well. These

are very useful to describe the behavior of objects that act differently according to the state they are in at the moment. The [State machine diagram](https://creately.com/lp/state-machine-diagram-tool) (<https://creately.com/lp/state-machine-diagram-tool>) below shows the basic states and actions.

(<https://creately.com/diagram-community/examples/t/state-chart>).

## Sequence Diagram

[Sequence diagrams](https://creately.com/diagram-community/popular/t/sequence-diagram) (<https://creately.com/diagram-community/popular/t/sequence-diagram>) in UML (<https://creately.com/lp/uml-diagram-tool>) show how objects interact with each other and the order those interactions occur. It's important to note that they show the interactions for a particular scenario. The processes are represented vertically and interactions are shown as arrows. This article explains the [purpose and the basics of Sequence diagrams](https://creately.com/blog/diagrams/the-basics-the-purpose-of-sequence-diagrams-part-1/) (<https://creately.com/blog/diagrams/the-basics-the-purpose-of-sequence-diagrams-part-1/>). Also, check out this complete [Sequence Diagram Tutorial](https://creately.com/blog/diagrams/sequence-diagram-tutorial/) (<https://creately.com/blog/diagrams/sequence-diagram-tutorial/>) to learn more about sequence diagrams.

You can also instantly start drawing using our [sequence diagram templates](https://creately.com/diagram-community/examples/t/sequence-diagram) (<https://creately.com/diagram-community/examples/t/sequence-diagram>).

(<https://creately.com/demo-start/?templd=gsx1cnemi>).

## Communication Diagram

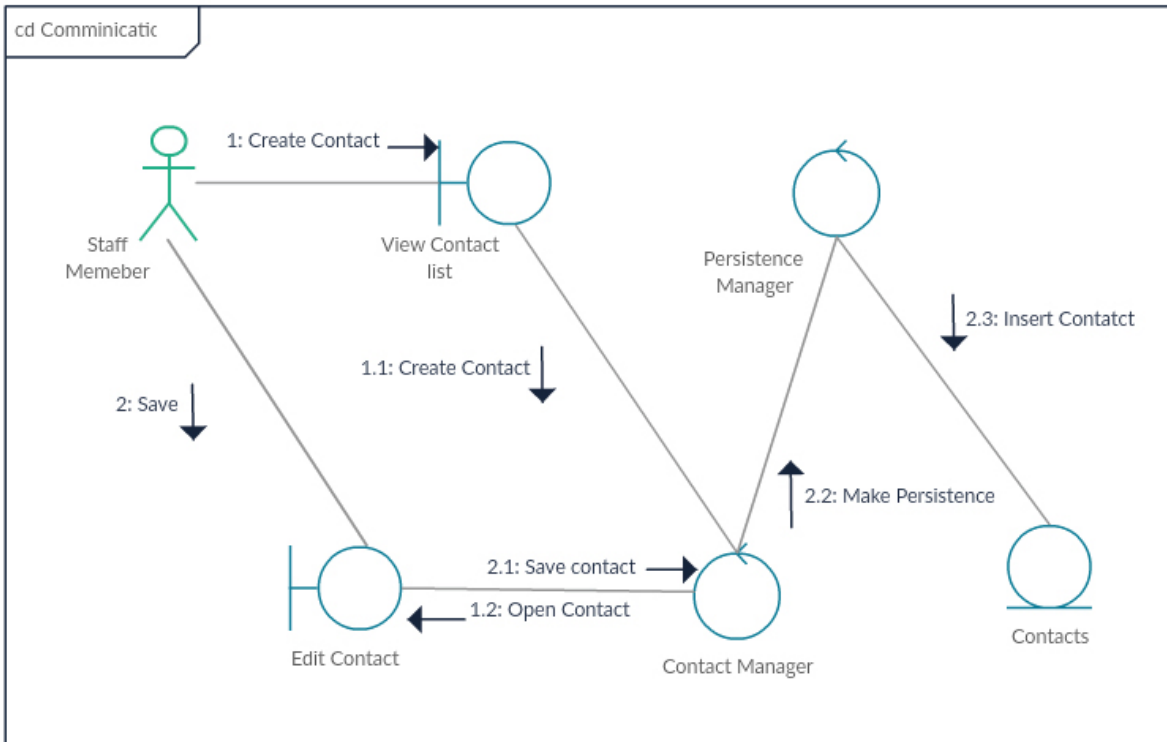

In UML 1 they were called [collaboration diagrams](#)

(<https://creately.com/diagram/example/jgi94q647/Collaboration%20diagram>). Communication

diagrams are similar to sequence diagrams, but the focus is on messages passed between objects.

The same information can be represented using a sequence diagram and different objects. [Click here to understand the differences using an example](#)

([http://www.sparxsystems.com/resources/uml2\\_tutorial/uml2\\_communicationdiagram.html](http://www.sparxsystems.com/resources/uml2_tutorial/uml2_communicationdiagram.html)).

(<https://creately.com/demo-start/?templd=j634oa3j3>).

## Interaction Overview Diagram

Interaction overview diagrams are very similar to activity diagrams. While activity diagrams show a sequence of processes, Interaction overview diagrams

(<https://creately.com/diagram/example/hoz91qr31/Interaction%20Overview%20Diagram>) show a sequence of interaction diagrams.

They are a collection of interaction diagrams and the order they happen. As mentioned before, there are seven types of interaction diagrams, so any one of them can be a node in an interaction overview diagram (<https://creately.com/diagram/example/jk0ehse02/Interaction%20Overview%20Diagram>).

(<https://creately.com/demo-start/?templd=j634oa3j4>)

## Timing Diagram

Timing diagrams are very similar to sequence diagrams. They represent the behavior of objects in a given time frame. If it's only one object, the diagram is straightforward. But, if there is more than one object is involved, a Timing diagram is used to show interactions between objects during that time frame.

Click here to create your [timing diagram](https://creately.com/lp/timing-diagram-software/) (<https://creately.com/lp/timing-diagram-software/>).

(<https://creately.com/creately-start?tempID=j634oa3j5>)

Mentioned above are all the UML diagram (<https://creately.com/lp/uml-diagram-tool/>) types. UML offers many diagram types (<https://creately.com/blog/diagrams/which-diagram-to-use/>), and sometimes two diagrams can explain the same thing using different notations.
