Example4: Write a Visual Basic program to build a system for input 10 numbers and find the following: (The profile is shown below)
1-The average of these numbers.
2-The maximum of these numbers.
3 - The minimum of these numbers.
4-Arrange the numbers ascending.
5-Colored the even and odd value differently.

## Sol.:

1-Create 1 TextBox with the following properties Notes:

- In order to create ten textboxes with the same name and properties, you should use "array" property.

| Text 1 |  |
| :--- | :--- |
| Name | N |
| Text |  |
| Index |  |

- Array can be created by doing the following steps:
a- create one text box and named it by any name such as (N).
b- copy the text box which was done in step (a) and paste it in the form 9 times.
When you paste this textbox the following message will appear
(you already have a control named(N). do you want to create a control array?)
press OK ,.
** notice that the property Index will be activated in the textboxes of the array.
And the controls will named ( $\mathrm{N}(0) \ldots \mathrm{N}(1) \ldots \mathrm{N}(2) \ldots$.etc)
3-Create 3 TextBoxes of Name (TxtAvg, TxtMax, TxtMin)
4-Create 5 CommandButtons of caption (AVG, MAX, MIN, Ascending, Colored).

5- writing the code:
5-1: print the following code in (AVG)

## Dim i As Integer, S As Single

$\mathrm{S}=\mathbf{0}$
For $\mathrm{i}=0$ To 9
S = S + Val ( $\mathbf{N}(\mathbf{i})$. Text )

## Next $i$

TxtAvg.Text = S / 10

5-2: print the following code in (max)
Dim i As Integer, Max As Single
$\operatorname{Max}=\operatorname{Val}(\mathbf{N}(0) . \operatorname{text})$
For $\mathrm{i}=1$ To 9
If Val (N(i).text ) > Max Then
Max = Val (N(i).text )
End If
Next $i$
TxtMax.Text $=$ Max

5-3: print the following code in (MIN)
Dim i As Integer, Min As Single
Min = Val (N(0).text )
For $\mathbf{i}=1$ To 9
If Val ( N(i).text ) < Min Then
Min = Val (N(i).text )
End If
Next $i$
TxtMin.Text $=$ Min

5-4 print the following code in (Ascending)
Dim i As Integer, $\mathbf{j}$ As Integer, $x$ as single
For $\mathrm{i}=0$ To 9
For $\mathbf{j}=\mathbf{i}+1$ To 9
If $\operatorname{Val}(\mathbf{N}(\mathbf{j}) . \operatorname{text})<\operatorname{Val}(\mathbf{N}(\mathbf{i}) . \operatorname{text})$ Then
$\mathbf{x}=\mathbf{N}(\mathbf{j})$.text
$\mathbf{N}(\mathbf{j}) . \operatorname{text}=\mathbf{N}(\mathbf{i}) . \operatorname{text}$
N(i).text = $\mathbf{x}$

## End If

## Next $\mathbf{j}$

Next ${ }^{1}$
5-5: Then print the following code in (Colored)
Dim i As Integer
For $\mathbf{i}=0$ To 9
If $\operatorname{Val}(\mathbf{N}(\mathrm{i})$.text) $\operatorname{Mod} 2=0$ Then
$\mathbf{N}(\mathbf{i})$.ForeColor $=\mathbf{Q B C o l o r}(4)$
Else
$\mathbf{N}(\mathbf{i})$.ForeColor $=\mathbf{Q B C o l o r}(\mathbf{1})$
End If
Next $i$
