Example5: Write a VB program to find the area of triangle and rectangle according to the value of $\mathbf{N}$ as follows
$A=\frac{1}{2} B H$......where $N=1$
A=BH .......where $\mathbf{N}=\mathbf{2}$
$B$ is a textbox named Btxt.... $H$ is a textbox named Htxt.... $N$ is a textbox named Ntxt... $A$ is a textbox named Area
Solution:
IF Ntxt.text $=1$ then
Area.text $=\mathbf{0 . 5}$ (Btxt.text*Htxt.text)

Else
Area.text=Btxt.text*Htxt.text
Calculate

Endif

Example 6: Write a VB program to find the surface area and volume of cylinder in two isolated command buttons (command1 and command2)
$\mathrm{A}=3.14$ (2R) H (in command1)
$\mathrm{V}=3.14 \mathrm{R}^{2} \mathrm{H}$ (in command2)
$R$ is a textbox named txtR.... $H$ is a textbox named txtH.... A or $V$ is a textbox named text 3

## Solution:

Code of Command1:
text3.text=3.14*2*val(txtR.text)*val(txtH.text)

code of Command2:
text3.text=3.14*(val(txtR.text) $)^{\wedge} \mathbf{2}^{*}$ val(txtH.text)
Command1

Example 7: write a VB program to input three degrees for three students then print on the form (named F1) the degree of each student with its status (fail or pass) in a table, where the degrees are textboxes named D1,D2 and D3 respectively. (write code only).

| F1 |  |  |  | $\begin{gathered} \text { الاسم البرمجي } 1 \text { D1 } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
|  | The Degree | Status | Print |  |
|  | 40 | fail |  | الاسم البرمجي |
|  | 55 | pass |  |  |
|  | 76 | pass |  |  |
|  |  |  |  | $\begin{gathered} \text { الاسم البر D3 D3 } \\ \hline \end{gathered}$ |

Solution:
The code can be written as follows:
F1.print "The Degree"; "
If D1.text >= 50 then
F1.print D1.text; "
Else
F1.print D1.text; " End if
If D2.text >= 50 then
F1.print D2.text; "
"; "pass"
Else
F1.print D2.text; "
"; "fail"
End if
If D3.text >= 50 then
F1.print D3.text; "
"; "pass"
Else
F1.print D3.text; " ", "fail"
End if

Example 8: write a visual basic program to find the value of S . Where N is a textbox named Ntxt and A is a textbox array named A and S is a textbox named Stxt (write code only).
$\mathrm{S}=\frac{B}{2}+\frac{2 B}{3}+\frac{3 B}{4}+\frac{4 B}{5}+\ldots \ldots \ldots \ldots .+\frac{N B}{(N+1)}$
$B=\sum_{I=1}^{5} 4 A(I)$

Solution:
Dim I as integer, j as integer, B as single, S as single
For $\mathrm{i}=0$ to 4
$\mathrm{B}=\mathrm{B}+4 * \mathrm{~A}(\mathrm{I})$
Next I
For $\mathrm{j}=1$ to Ntxt.text
$\mathrm{S}=\mathrm{S}+(\mathrm{j} * \mathrm{~B}) /(\mathrm{j}+1)$
Next j
Stxt.text=S

Solution of H.W 2
H.W2: Write a (VB) program (profile and code) to find the value of $\mathbf{X}$ mentioned in the following equation:

$$
x=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a}
$$

Solution: The profile is shown below

The code can be written as follows:

$$
x=\frac{-b+\sqrt{b^{2}-4 a c}}{2 a}
$$

If $\mathrm{a}=0$ or $\left((\operatorname{val}(\mathrm{b} . \text { text }))^{\wedge} 2-4 * \operatorname{val}(\right.$ a.text $) * \operatorname{val}($ c.text $\left.)\right)<0$ then x.text="error"

Else
x.Text $=\left(-\operatorname{Val}(b . T e x t)+((\operatorname{Val}(b . T e x t)) \wedge 2-4 * \operatorname{Val}(a . T e x t) * \operatorname{Val}(c . T e x t))^{\wedge} 0.5\right)$ $/(2 * \operatorname{Val}($ a.Text $))$

End if
H.W3: Write a (VB) program (profile and code) to find the value of the series $\mathbf{X}$ :
$\mathrm{X}=\frac{Z}{3}+\frac{3 Z}{5}+\frac{5 Z}{7}+\frac{7 Z}{9}+\ldots \ldots \ldots \ldots \ldots+\frac{(2 N-1) Z}{(2 N+1)}$
Where $\mathbf{N}$ is a textbox named $\mathbf{N}$, $a$ and $b$ is a textboxes named $a$ and $b$ respectively, $X$ is a textbox named $X$ (write code only).
$\mathrm{Z}=\sqrt{a^{2}+b^{2}}$
