## Example 6:

You have a number equals to ( N ), write an algorithm and draw the flow chart to find the square of $(\mathrm{N})$ if it equals or greater than ten otherwise find its cubic value. Solution:

1-Start
2-Read the value of N
3-Check if N equals or greater than 10 , then $\mathrm{A}=\mathrm{N}^{2}$
4- if $\mathrm{N}<10$, then $\mathrm{A}=\mathrm{N}^{3}$
5- Print A
6- End

## Example 7:

Write an algorithm and draw the flow chart to find the value of (X) from the following equations:

$$
\begin{gathered}
\mathrm{X}=2 \mathrm{a}^{3}+\mathrm{b}^{2}-6 \mathrm{c} \text { when } \mathrm{a}=\mathrm{b} \text { and } \mathrm{c}<10 \\
\mathrm{X}=7 \mathrm{a}+2 \mathrm{~b}^{4}+5 \mathrm{c} \text { when } \mathrm{a}<\mathrm{b}<\mathrm{c} \\
\mathrm{X}=\frac{3 a-6 b}{c^{3}}
\end{gathered}
$$

Solution:
1- start
2- read the values of $a, b$ and $c$
3- if $a=b$ and $c<10$ compute $X=2 a^{3}+b^{2}-6 c$ and go to step 6
4- if $b>a$ and $b<c$ compute $X=7 a+2 b^{4}+5 c$ and go to step 6
$5-\mathrm{X}=\frac{3 a-6 b}{c^{3}}$
6 - print X
7 - end
