## Fluid in motion

The behavior of fluid in motion is very complex due to the large number of variable involved. Since viscosity introduces a great complexity to fluid flow behavior, we assume the fluid is an ideal one, this mean no viscosity and no shear stress as it flow. We also assume incompressible flow which mean that the density of fluid does not change throughout the system.

## Properties of flow:

Steady flow: when there is no change in flow properties(Q,v,h) with time.

Unsteady flow: when there is change in flow properties with time.

Uniform flow: when there is no change in fluid properties with distance.

Non-uniform flow(2D): flow with two directions (x,y) and velocity distribution become parabola section with maximum value at the center and minimum at the wall of pipe.

Three-dimensions flow(3D): flow with 3 directions ( $x, y, z$ ) as flow through orifice.

Steady vs. Non-Steady Flow
Steady

(C)The COMET Program

## The continuity equation

This theorem state that the mass can neither be created nor destroyed. For steady flow the rate which mass enters a control volume equals the rate at which mass leaves this volume. in fig.1, fluid is flowing from left to right the pipe has two different size (A1 and A2) the volume between 1 and 2 is the control volume (CV), the rate at which the mass enter equals the rate at which the mass leaves CV.

## Maas flow rate

From fig. 1 let M represent the rate at which mass enter or leave the CV, we have M1=M2, thus for steady flow the mass flow rate at the inlet to the CV equals mass flow rate at the exit from the CV .

Fig. 1
$M_{1}=\frac{m_{1}}{t}=\frac{p_{1} A_{1} L_{1}}{t}=\mathrm{P}_{1} A_{1} v_{1} \quad$ and
$M_{2}=\frac{m_{2}}{t}=\frac{\mathrm{P}_{2} A_{2} L_{2}}{t}=\mathrm{P}_{2} A_{2} v_{2}$
So $\quad P_{1} A_{1} v_{1}=P_{2} A_{2} v_{2}$

## Weight flow rate

Since specific weight equals times the acceleration of gravity ( $\gamma={ }^{*}{ }^{*} \mathrm{~g}$ )

The continuity equation shows that we also have equality of weight flow rates entering and leaving the $\mathrm{CV}, \mathrm{W} 1=\mathrm{W} 2$
$\gamma_{1} \mathrm{~A}_{1 \mathrm{~V}_{1}}=\gamma_{1} \mathrm{~A}_{1 \mathrm{~V}}{ }_{1}$

## volume flow rate

for steady incompressible flow the volume flow rate is also constant represented by Q (flow), because flow =volume per time.

Q1=Q2
$\frac{\text { Vol. } 1}{t}=\frac{\text { vol. } 2}{t}$
$\frac{\text { vol }_{1}}{\text { vol }_{2}}=\frac{A_{2}}{A_{1}}=\left(\frac{D_{2}}{D_{1}}\right)^{2}$
D is the diameter for circular section.
$\operatorname{Or} \mathrm{Q}=\mathrm{v}^{*} \mathrm{~A} \quad(\mathrm{v}$ is velocity)
Examples:
Ex1:
For the fig. 1 the following data are given: $D_{1}=4 \mathrm{in} . \quad D_{2}=2 \mathrm{in}$. $\mathrm{v}_{1}=4 \mathrm{ft} / \mathrm{s}$

Find the volume flow rate, fluid velocity at sec. 2, weight flow rate and mass flow rate?

Fig. 1
$\mathrm{Q}=\mathrm{Q}_{1}=\mathrm{A}_{1} \mathrm{~V}_{1}$
$\mathrm{A}_{1}=\frac{\pi}{4} \mathrm{D}^{2}=\frac{\pi}{4}(4 / 12)^{2}=0.0873 \mathrm{ft}^{2}$
$\mathrm{Q}=(0.0873)(4)=0.349 \mathrm{ft}^{3} / \mathrm{s}$
b- $\quad \mathrm{V}_{2}=\mathrm{V}_{1}\left(\mathrm{D}_{1} / \mathrm{D}_{2}\right)^{2}$
$=4(4 / 2)^{2}=16 \mathrm{ft} / \mathrm{s}$
$\mathrm{c}-\mathrm{W}=\mathrm{W}_{1}=\gamma \mathrm{A}_{1} \mathrm{v}_{1}=\gamma \mathrm{Q}_{1}=62.4^{*} 0.349=21.8 \mathrm{lb} / \mathrm{s}$
$\mathrm{d}-\mathrm{M}=\mathrm{M}_{1}=\mathrm{pA}_{1} \mathrm{v}_{1}=\mathrm{pQ}_{1}=1.94 * 0.349=0.677$ slug $/ \mathrm{s}$

Ex2: A pipe line of 300 mm diameter carrying water at an average velocity $4.5 \mathrm{~m} / \mathrm{s}$ branches into two pipes of 150 mm , 200 mm dia., if the average velocity in the 150 mm is $5 / 8$ of the
velocity in the main pipe, find the average velocity of flow in 200 mm , and the total flow rate in the system by $1 / \mathrm{s}$ ?
$\mathrm{Q}=\mathrm{AV}=\mathrm{Q} 1+\mathrm{Q} 2$
$\mathrm{AV}=\mathrm{A} 1 \mathrm{VA}+\mathrm{A} 2 \mathrm{~V} 2$
$\frac{1}{4} \pi(0.3)^{2 *} 4.5=\frac{1}{4} \pi(0.15)^{2 *} \frac{5}{8} * 4.5+\frac{1}{4} \pi(0.2)^{2 *} \mathrm{~V}_{2}$
$\mathrm{V}_{2}=8.54 \mathrm{~m} / \mathrm{s}$
Total flow $\mathrm{Q}=\frac{1}{4} \pi(0.3)^{2 *} 4.5$
$=0.318 \mathrm{~m}^{3} / \mathrm{s}$
$=318 \mathrm{l} / \mathrm{s}$

## Ex3:

The velocity of a liquid ( $\mathrm{s} . \mathrm{g}$ ) $=1.4$, in 150 mm pipeline is $0.8 \mathrm{~m} / \mathrm{s}$. Calculate the rate of flow in $1 / \mathrm{s}, \mathrm{m}^{3} / \mathrm{s}, \mathrm{kg} / \mathrm{s}$ and $\mathrm{KN} / \mathrm{s}$ ?
$\mathrm{Q}=\mathrm{VA}=0.8\left(\frac{\pi}{4}\right)\left(\frac{150}{1000}\right)^{2}=0.01414 \mathrm{~m}^{3} / \mathrm{s}=14.141 \mathrm{l} / \mathrm{s}$
$\mathrm{M}=\mathrm{p} * \mathrm{Q}=(1.4 * 1000) * 0.01414=19.79 \mathrm{~kg} / \mathrm{s}$
$\mathrm{W}=\gamma^{*} \mathrm{Q}=(1.4 * 9.8) * 0.01414=0.194 \mathrm{KN} / \mathrm{s}$

Example 4: (fig. 2) Two stream of water enter the mixing chamber if the inlet velocity $80 \mathrm{~kg} / \mathrm{sec}$. and $100 \mathrm{~kg} / \mathrm{sec}$. find the outlet mass flow? And outlet weight flow?

Fig. 2
Total mass flow rate $=\mathrm{m}_{1}+\mathrm{m}_{2}$
$80+100=180 \mathrm{~kg} / \mathrm{sec}$.
$\mathrm{W}=$ mass $* \mathrm{~g}$
$180 * \mathrm{~g}=180 * 9.8=1764 \mathrm{~N} / \mathrm{sec}$

## Bernoullis equation

Bernoullis equation is based on the conservation of energy law, which states that energy can be neither created nor destroyed. The total energy possessed by a given mass of fluid can be considered to consist of three type: potential, kinetic and flow energy.

Fig. 3 shows fluid flowing from left to right, the total energy by a given weight w of fluid entering CV at sta. 1 and the same weight of fluid leaving CV at sta.2.

Fig. 3
Potential energy: الطاقة الكامنة
The fluid element of weight $w$ has a potential energy due to its elevation Z related to a reference plane.
$P E=w z$

Kinetic energy: الطاقة الحركية
The fluid element of weight w moving with a velocity
$\mathrm{KE}=\frac{1}{2} \mathrm{mv}^{2}$
Flow energy; طاقه الجريان
It is the amount of work that pressure accomplishes by pushing the element of weight w at sta. 1 into the CV or pushing the element of weight $w$ at sta. 2 out of CV.
$\mathrm{FE}=\frac{P w}{\gamma}$
Statement of Bernoullis equation:
Daniel Bernoulli an eighteen century Swiss scientist, formulated his equation by noting that the total energy possessed by the fluid in CV does not change with respect to time.

Total energy in element at $1=$ total energy in element at 2
$(\mathrm{PE}+\mathrm{KE}+\mathrm{FE}) 1=(\mathrm{PE}+\mathrm{KE}+\mathrm{FE}) 2$
$\mathrm{w} \mathrm{Z}_{1}+\frac{1}{2} \frac{w}{g} \mathrm{~V}_{1}{ }^{2}+\frac{P_{1} W}{\gamma}=\mathrm{w}_{2}+\frac{1}{2} \frac{w}{g} v_{2}^{2}+\frac{P_{2}}{\gamma} w \quad$ divide by w
$\mathrm{Z}_{1}+\frac{v_{1}{ }^{2}}{2 g}+\frac{P_{1}}{\gamma}=\mathrm{Z}_{2}+\frac{v_{2}{ }^{2}}{2 g}+\frac{P_{2}}{\gamma}$
$\frac{P_{1}}{\gamma}+\frac{v_{1}{ }^{2}}{2 g}+\mathrm{Z}_{1}=\frac{P_{2}}{\gamma} \frac{v_{2}{ }^{2}}{2 g}+\mathrm{Z}_{2}$
Z : elevation head.
$\frac{P}{\gamma}$ : pressure head.
$\frac{v_{2}{ }^{2}}{2 g}$ : velocity head

Fig. 4

Ex5:For the pipe of fig. 5 find P2 if the following data are given:p1 $=20 \mathrm{psi}, \mathrm{D} 2=2$ in and $\mathrm{D} 2=1.5 \mathrm{in}, \mathrm{Q}=200 \mathrm{gpm}$ of water?

Fig. 5
$\mathrm{Z}_{1}+\frac{v_{1}{ }^{2}}{2 g}+\frac{P_{1}}{\gamma}=\mathrm{Z}_{2}+\frac{v_{2}{ }^{2}}{2 g}+\frac{P_{2}}{\gamma}$
$\mathrm{V} 1=\frac{Q}{A 1}=\frac{200 * 1 * 231 * 1}{\frac{\pi}{4}\left(\frac{2}{12}\right) * 60 * 1 * 1728}$
$=20.4 \mathrm{ft} / \mathrm{s}$
$\mathrm{v} 2=\mathrm{v} 1(\mathrm{D} 1 / \mathrm{D} 2)^{2}$
$\frac{20 * 144}{62.4}+\frac{20.4}{2(32.2)}=\frac{P 2}{62.4}+\frac{36.2^{2}}{2(32.2)}+46.2+6.46=\frac{P 2}{62.4}+20.3$
Solving for P at 2 yields:
$\mathrm{P} 2=2020 \mathrm{lb} / \mathrm{ft}^{2}$ gage $=14 \mathrm{psig}$.

Torricillis theorem:

## Fig. 6

The velocity of free jet of fluid is equal to:
$\mathrm{V}=\sqrt{2 g h}$
Because:
$1-\mathrm{P} 1=\mathrm{P} 2$ atmosphere pressure
2-v1 negligible cross sec. A1 very large compared with A2 so
$\mathrm{v}=\frac{A 2}{A 1} \mathrm{v} 2 \quad$ (very small number)
3-Z2 can be taken as a zero number.

EX6:for the system in fig. $6,198 \mathrm{~h}=36 \mathrm{ft}$ and diameter of side opening is 2 in find the jet velocity and the volume flow rate in gpm?
$\mathrm{V} 2=\sqrt{2 g h}$
$=\sqrt{2 * 32.2 * 36}=48.3 \mathrm{ft} / \mathrm{s}$
$\mathrm{Q}=\mathrm{A} 2 \mathrm{v} 2=\frac{\pi}{4}(2)^{2 *} 48.3 * 12 * \frac{1}{231 \text { in }^{3}} * 60$
$=473 \mathrm{gpm}$

## Ex. 7

In fig. 7 whoe do the magnitude of the velocity of the three jets compare with each other?

Fig. 7
From the torricillies theorem
$\mathrm{V}=\sqrt{2 g h}$
$\mathrm{V} 1=\mathrm{v} 2=\mathrm{v} 3=\sqrt{2 * 9.8 * 10}=14 \mathrm{~m} / \mathrm{s}$
Ex. 8
In fig. 8, a free jet of water going out of tank, find the distance x the jet make contact with ground?

Fig. 8
$\frac{P_{1}}{\gamma}+\frac{v_{1}{ }^{2}}{2 g}+Z_{1}=\frac{P_{2}}{\gamma} \frac{v_{2}{ }^{2}}{2 g}+Z_{2}$
$\mathrm{v}_{1} \mathrm{~A} 1=\mathrm{v} 2 \mathrm{~A} 2$
$\mathrm{V} 1=\mathrm{V} 2 \mathrm{~A} 2 / \mathrm{A} 1$
$\frac{P_{1}}{\gamma}+\frac{(\mathrm{V} 2 \mathrm{~A} 2 / \mathrm{A} 1)^{2}}{2 g}+\mathrm{Z}_{1}=\frac{P_{2}}{\gamma} \frac{v_{2}{ }^{2}}{2 g}+\mathrm{Z}_{2}$
$\frac{600 * 1000}{9800}+\frac{(V 2 * 16) 2}{2 * 9.8}+0=0+\frac{V 2^{2}}{2 * 9.8}+0$
${ }^{61.22+13.06} V 2^{2}=19.6^{*} V 2^{2}$
$\mathrm{V} 2=3.06 \mathrm{~m} / \mathrm{s}$
$\mathrm{x}=\mathrm{V} / \mathrm{t}$ $\qquad$
$\mathrm{y}=\frac{g}{2} t^{2} \quad \xrightarrow{\mathrm{E}(2 h / g)}$

$$
\begin{aligned}
& \mathrm{t}=\mathrm{t} \\
& \text { so } \quad \frac{X}{V}=\frac{\sqrt{ }(2 h / g)}{} \\
& \mathrm{X}=\mathrm{V} * \frac{\sqrt{ }(2 h / g)}{} \\
& =3.06 \xrightarrow{\sqrt{(20.75 / 9.8)}}=1.197 . \mathrm{m}
\end{aligned}
$$

## The siphon:

It is a device that is used to cause a liquid to flow from one container in an upward direction downward in to a second. as shown in fig.6,

Fig. 9

Point 1 lies in the free surface in the container.
Point 2 lies in the U-tube at its highest elevation.
Point 3 lies in the U-tube at the lowest elevation

The output at 3 is a free jet.
If we apply Bernoullis eq. for pointe $1 \& 3$
$\mathrm{P} 1=\mathrm{P} 3, \quad \mathrm{v} 1 \approx 0, \quad \mathrm{Z} 1-\mathrm{Z} 3=\mathrm{h}$, so
$\mathrm{V} 3=\sqrt{2 g h}$
So Q3 $=\mathrm{A} 3 \mathrm{v} 3$
$\mathrm{P} 2=\gamma(\mathrm{Z} 1-\mathrm{Z} 2)+\gamma\left(-\mathrm{v}^{2}{ }_{2} / 2 \mathrm{~g}\right)$
EX9:
Water is siphoned from a large storage tank through 50 mm diameter hose(fig.10). Find the maximum height H of a building over which the water can be siphoned?

Fig. 10
$\mathrm{V} 3=\sqrt{2 g h}$
$\mathrm{V} 3=\sqrt{2 * 9.8 * 3}=7.67 \mathrm{~m} / \mathrm{s}$
$\mathrm{V} 2=\mathrm{v} 3$
$\mathrm{P} 2=\gamma(\mathrm{Z} 1-\mathrm{Z} 2)-\gamma\left(\mathrm{v}^{2}{ }_{2} / 2 \mathrm{~g}\right)$
$2.34-101) \mathrm{KPa}=9800 \mathrm{~N} / \mathrm{m}^{3}(3-\mathrm{H})-9800 * \frac{7.67}{2 * 9.81}$
$-98700=29400-9800$ H -29380
$\mathrm{H}=10.1 \mathrm{~m}$

## Ex. 10

The siphon in fig. 11 is filled with water and discharged at 150 $\mathrm{L} / \mathrm{s}$, find the velocity in pipe, and the pressure at point 2 ?

Fig. 11
$\mathrm{Q}=\mathrm{V} * \mathrm{~A}$
$\mathrm{V}=.15 / 0.2^{2} * \frac{\pi}{4}=4.777 \mathrm{~m} / \mathrm{s}$
$\frac{P_{1}}{\gamma}+\frac{v_{1}{ }^{2}}{2 g}+\mathrm{Z}_{1}=\frac{P_{2}}{\gamma} \frac{v_{2}{ }^{2}}{2 g}+\mathrm{Z}_{2}$
$0+0+0=\frac{P_{2}}{\gamma}+\frac{4.77^{2}}{2 * 9.8}+2$
$\mathrm{P}=31010.03 \mathrm{~Pa}$.

Ex11: Water is flowing upward through the pipeline (fig.12) ,a manometer measures the pressure difference p1-p1. Find the volume of flow rate?

Fig. 12
$\mathrm{P}_{\mathrm{B}}=\mathrm{P}_{2}+9800 * 1=\mathrm{P}_{2}+9800$
$\mathrm{Pa}=\mathrm{Pb}+9800^{*} 13.6^{*} 0.15$
$\mathrm{Pa}=\mathrm{Pb}+20000 \mathrm{P}=\mathrm{P} 2+29800$
P1=Pa-3430=P2+26370
P1-P2=26370 pa
$\mathrm{Z}_{1}+\frac{v_{1}{ }^{2}}{2 g}+\frac{P_{1}}{\gamma}=\mathrm{Z}_{2}+\frac{v_{2}{ }^{2}}{2 g}+\frac{P_{2}}{\gamma}$
$\mathrm{A} 1 \mathrm{v} 1=\mathrm{A} 2 \mathrm{v} 2$
$\mathrm{V} 2=\mathrm{A} 1 \mathrm{v} 1 / \mathrm{A} 2$
$=\left(\frac{400}{150}\right)^{2} * \mathrm{v} \mathrm{l}=7.11 \mathrm{v} 1$
$\frac{v^{2}-v_{1}{ }^{2}}{2 g}=(\mathrm{Z} 1-\mathrm{Z} 2)+(\mathrm{P} 1-\mathrm{P} 2) / \gamma$
$\frac{\left(7.11 v_{1}\right)^{2}-v_{12}}{2 * 9.81}=-(1-0.2)+\frac{26370}{9800}$
$\frac{49.6 v_{1}{ }^{2}}{19.6}=-0.8+2.69=1.89 \mathrm{~m}$
$\mathrm{V} 1=0.89 \mathrm{~m} / \mathrm{s}$
$\mathrm{Q} 1=\mathrm{A} 1 \mathrm{v} 1=\frac{\pi}{4}(0.4)^{2} * 0.86=0.108 \mathrm{~m}^{3} / \mathrm{s}$

## The pitot-static tube:

Fig.9, shows a pitot tube installed in a pipeline along with piezometer, both are pressure measuring device. Unlike, piezometer, pitot continues inward toward the centerline of the pipe. As a result the fluid that inters the inside of the pitot tube comes to a stop (stagnates), in contrast the piezometer tube allows the fluid to travel past without any change of velocity.

Fig. 13
$\mathrm{Z}_{1}+\frac{v_{1}{ }^{2}}{2 g}+\frac{P_{1}}{\gamma}=\mathrm{Z}_{2}+\frac{v_{2}{ }^{2}}{2 g}+\frac{P_{2}}{\gamma}$
$\mathrm{Z} 1=\mathrm{Z} 2$ and $\mathrm{v} 2=0$ (stagnation point)
$\mathrm{H}=\frac{v_{1}{ }^{2}}{2 g}$

## Ex 12:

Determine the flow rate through the pipe?

Fig. 14
$\mathrm{Z} 1=\mathrm{Z} 2$
$\mathrm{v} 2=0$
$\frac{v_{1}{ }^{2}}{2 g}+\frac{P_{1}}{\gamma}=\frac{P_{2}}{\gamma}$
$\mathrm{V} 1=\sqrt{\frac{2 g(P 2-P 1)}{\gamma}}$
P1- $\gamma \mathrm{L}-\gamma_{\mathrm{m}} \mathrm{h}+\gamma(\mathrm{L}+\mathrm{h})=\mathrm{P} 2$
So v1= $\sqrt{\frac{2 g\left(1-\frac{\gamma m}{\gamma}\right) h}{}}$
$=(2(9.81)(1-900 / 999)(2.5))^{0.5}$
$=2.2 \mathrm{~m} / \mathrm{s}$
$\mathrm{Q}=\mathrm{AlV1}=\frac{\pi}{4}(0.08)^{2}(2.2)=0.0111 \mathrm{~m}^{3} / \mathrm{s}$.
Example 13:
In the pipe in figure 15 , a water manometer is connected to ends of a piezometer tube and pitot tube, find the water velocity and the flow?

Fig. 15
$\frac{P_{1}}{\gamma}+\frac{v_{1}{ }^{2}}{2 g}+\mathrm{Z}_{1}=\frac{P_{2}}{\gamma} \frac{v_{2}{ }^{2}}{2 g}+\mathrm{Z}_{2}$
From manometer
$\mathrm{P} 1-\gamma w \mathrm{~h}+\gamma h g^{*} \mathrm{~h}-\gamma w \gamma^{*} \mathrm{~h}+\gamma w \mathrm{~h}=\mathrm{P} 2$
$\mathrm{P} 1-\gamma w \mathrm{~h}+13.6$ * $62.4 *(1 / 12)-62.4(1 / 12)+\gamma w * \mathrm{~h}=\mathrm{P} 2$
$\mathrm{P} 2-\mathrm{P} 1=65.52 \mathrm{ib} / \mathrm{ft}^{2}$
From birnoulis eq.

$$
\frac{65.52}{62.3}=\frac{v 1^{2}}{2 * 32.2}
$$

$\mathrm{V}=8.22 \mathrm{ft} / \mathrm{s}$
$\mathrm{Q}=\mathrm{V}^{*} \mathrm{~A}$
$8.22 * \frac{2^{2}}{12^{2}} \frac{\pi}{4}=1.0716 \mathrm{ft}^{3} / \mathrm{s}$

## Verturi, nozzle and orifice flow meters:

Three additional used flow meters measuring that operate on the principles of Bernoullis eq., venture, nozzle and orifice flow meters. They based on the principle that as the velocity of flow increases, a drop in pressure occurred. The measurement of the pressure drop can be used to indicate the flow rate.

Fig. 16
Figs16, 7, show an actual venturi meter and a venturi meter is installed to the pipeline whose flow rate is measured, venture meter consists of a converging section followed by a constant diameter section (throat) followed by a diverging section.

Fig. 17
$\mathrm{Z}_{1}+\frac{v_{1}{ }^{2}}{2 g}+\frac{P_{1}}{\gamma}=\mathrm{Z}_{2}+\frac{v_{2}{ }^{2}}{2 g}+\frac{P_{2}}{\gamma}$
$\mathrm{Z} 1=\mathrm{Z} 2$
$\mathrm{A} 1 \mathrm{v} 1=\mathrm{A} 2 \mathrm{v} 2$

So Cv ideal $=\sqrt{\frac{2(P 1-P 2)}{\rho\left(1-\left(\frac{A 2}{A 1}\right)^{2}\right)}}$
To calculate the flow coefficient $\mathrm{CV}=\frac{V 2 \text { actual }}{\text { V2 ideal }}$
$\mathrm{Q}=\mathrm{v} 2$ actual $\mathrm{A} 2=\mathrm{Cv}$ ideal A 2
$\mathrm{Q}=\operatorname{Cv} A 2 \sqrt{\frac{2(P 1-P 2)}{\rho\left(1-\left(\frac{A 2}{A 1}\right)^{2}\right)}}=\operatorname{Cv} A 2 \sqrt{\frac{2(P 1-P 2)}{\rho\left(1-\left(\frac{D 2}{D 1}\right)^{2}\right)}}$

Fig.18, shows the nozzle meter contain a nozzle has a flange on its upstream face.

Fig. 18
$\mathrm{Q}=\operatorname{Cn} A 2 \sqrt{\frac{2(P 1-P 2)}{\rho\left(1-\left(\frac{D 2}{D 1}\right)^{2}\right)}} \quad$ Cn discharge coefficient.

Fig.19, shows the orifice meter it is a simple flow meter consist of a circular plate containing a sharp edge, the upstream fluid approach the orifice it must turn inward to inter the orifice. The fluid jet cannot immediately change directions as its flow, thus the jet area continues to contract until its minimum value is obtained downstream:

Fig. 19
$\mathrm{Q}=C 0 A 0 \sqrt{\frac{2(P 1-P 2)}{\rho\left(1-\left(\frac{D 0}{D 1}\right)^{2}\right)}} \quad \mathrm{A} 0:$ area of the hole in the orifice plate.

## Ex 14:

Venture meter of fig.17, has the following data: D1 3in, D20.75 in, Cv 0.98 , fluid in manometer is mercury, $\mathrm{P} 2-\mathrm{P} 1=10 \mathrm{psi}, \mathrm{H}=20$ in Hg , find the flow rate in gallons per minute ?
$\mathrm{Q}=C v A 2 \sqrt{\frac{2(P 1-P 2)}{\rho\left(1-\left(\frac{A 2}{A 1}\right)^{2}\right)}}$
$\mathrm{A} 2=\frac{\pi}{4}\left(\frac{0.75}{12}\right)^{2}=0.00307 \mathrm{ft}^{2}$
${ }^{\text {water }}=1.94$ slugs $/ \mathrm{ft}^{3}$
P1-P2=10*144=1440 lb/ft ${ }^{2}$
$\left(\frac{A 2}{A 1}\right)^{2}=\left(\frac{0.75}{3}\right)^{4}=0.00391$
$\mathrm{Q}=0.98^{*} 0.00307 * \sqrt{\frac{2 * 1440}{1.94(1-0.00391)}}=0.116 \mathrm{ft}^{3} / \mathrm{s}$
$\mathrm{Q}=0.116 * 1728 * \frac{1}{231} * 60=52.1 \mathrm{gpm}$
$\mathrm{P} 2-\mathrm{P} 1=\mathrm{H}(\gamma \mathrm{Hg}-\gamma$ water $)=20 * 1 / 12 *(847-62.4)=1308 \mathrm{ib} / \mathrm{ft}^{2}$
$\mathrm{Q} \propto \sqrt{P 1-P 2}$

$$
\mathrm{Q}=52.1 * \sqrt{\frac{1308}{1440}}=49.7 \mathrm{gpm} .
$$

Ex. 15 An orifice flow meter consists of a 100 mm dia. pipe with 50 mm dia. sharp edge orifice. When water flow through orifice a U- tube manometer is connected indicates a differential head of 350 mm mercury, if the discharge coefficient is 0.65 , find the flow?
$\mathrm{Q}=C 0 A 0 \sqrt{\frac{2(P 1-P 2)}{\rho\left(1-\left(\frac{D 0}{D 1}\right)^{2}\right)}}$
$\mathrm{Q}=0.62 * 0.0025 \frac{\pi}{4} \frac{\sqrt{2 *(0.53 * 13.6 * 9800)}}{\sqrt{1000 *\left(1-\frac{0.0025}{0.01}\right)}}$
$\mathrm{Q}=0.0135 \mathrm{~m} 3 / \mathrm{s}$

## Extra examplas:

1- For the figure above find Q ?

2- Water flow through a venturi meter an inlet dia. $=100 \mathrm{~mm}$ and throat dia. $=50 \mathrm{~mm}, \mathrm{P}$ at inlet $=70 \mathrm{kpa}$. And at the throat 75 mm mercury, if the discharge coefficient $=0.95$, find the flow?
