# Health care Administration

- ❑ Process by which knowledge, energies & social structures are systematically utilized to achieve specific objectives as health care.
- ❑ Ideal utilization of human & material resources to reach health care goals in least time & effort.
- ❑ Exact knowledge of what you want health manpower to do, & be sure they are doing it in the best way (operative definition).

# Functions

- ❑ **Planning functions:** What do we need? Manpower planning & service planning.
- ❑ **Management function (implementation):** what to do & how to do it? Day by day running of programs.
- ❑ **Evaluation function (control):** Does what we plan work? Does what is on paper is similar to what is on the ground?

# Successful Administration for health programs

- ❑ **Accepted by users:** social, cultural, cost, time, distance.
- ❑ **Achieve their objectives** (effective)
- ❑ **Linked to socioeconomic development:** health  $\leftrightarrow$  SES (investment expenditure).
- ❑ **Work efficiently:** output/input %

# Health Program Acceptability

• Time

• Socio cultural

Organized

No social distance

Affordable

Accessible

• Cost

• Geo-graphical

# Failure causes

- ❑ Poor process of administration (management)
- ❑ Unqualified administrators (Drs)
- ❑ Complexity of health care:
  - Promotive
  - Preventive
  - Curative
  - Rehabilitative

We both do want the best patient care  
It's a responsibility we all do share
