| Al-Mustansiriyah University <br> Faculty of Engineering <br> Mech. Eng. Dept. <br> Graduate studies <br> Exam : (1) |  | Subject: Manufacturing Processes <br> Time: ... Hours <br> Class: $3^{\text {th }}$ <br> Date:16 June 2015 |
| :---: | :---: | :---: |
|  | 2014-2015 | Max.Mark:100\% |

Q1-A: The contour in Fig. 1 , of depth of 4 mm with surface finishing of $\mathrm{Ra}=3.2 \mu \mathrm{~m}$, so:
(1) Select the optimal operating conditions from table (1), for this job by using carbide end mill, the raw material is Law carbon-steel with dimensions 80 mmx 70 mmx 10 mm .
(2) Calculate the revolutions of tool (RPM).
(3) Write CNC program for machining this contour.

Hint:
N01 G90 G80 T00;
N02 G00 X.... Y..... Z....;
N03 M03 S.....;
N04 X... Y.... Z....;
N05 Z....; N06 G01 Z.... F....; N... cont. (17 marks)

Q1-B: Write the number and right character for die shown in Fig. 2 ( 8 marks)
a-Die b-Die holder
c-Guide d-punch e-Guide bush $f$ - shank g - spring h - punch holder i - bending
j-drawing
k - extrusion
I-cutting

Fig (2) Die for
8

Fig. 1

Q2-A: Figure 3 shows the detail drawing of a finished steel rod, so:
(1) Sketch the detail drawing of semi-finished material (blank of casting) suitable for production of 1000 pcs daily
(2) Sketch the technical operations sequence for this blank.

HINT: estimate the optimal operating conditions and all technical data for machining from table 1.
(17 marks)
Q2-B: Write the number and right character as shown in Fig. 4 ( 8 mark)
