

# INTRODUCTION TO COMPUTER

**UQBA BN NAFAA MOHAMMED**  
**ASSISTANT LECTURER**

# What is Computer?

**Computer:** is an electronic device which accepts data, processes it and returns new information as output.

- ❖ **Data:** raw facts.
- ❖ **Information:** meaningful data.

# Computer Components

The computer system has two main components which when both combined makes a computer system .

- ❖ Hardware.
- ❖ Software.

# Computer Components

## ❖ Hardware

The physical parts of the computer system (electronic and mechanical parts), it cannot do any work by it self. it needs certain programs to do some work.

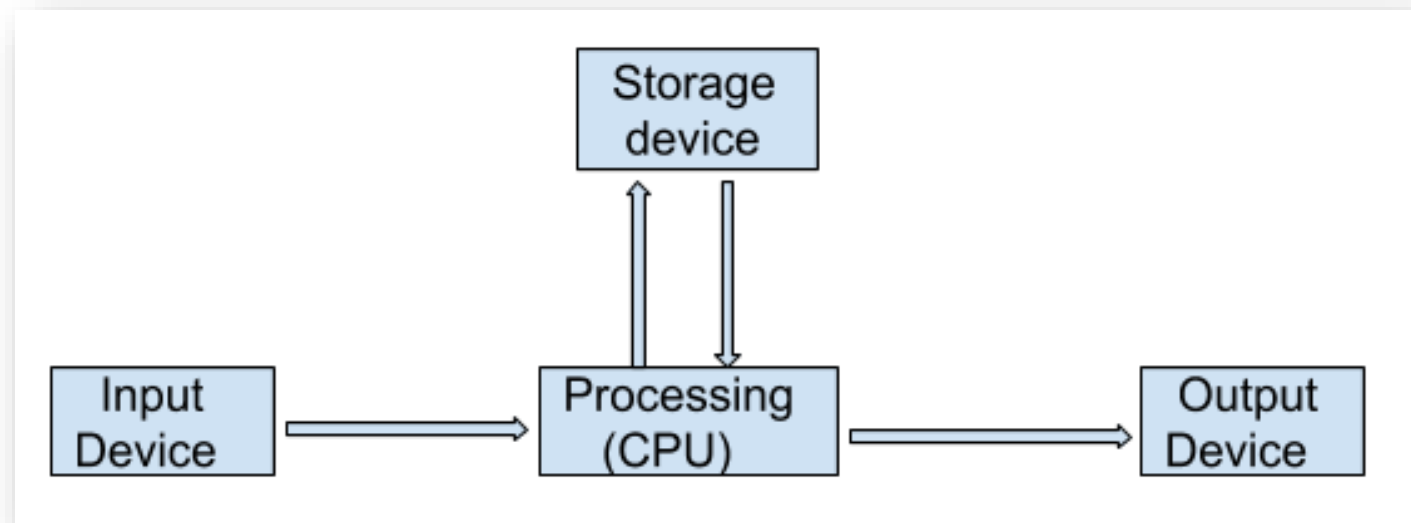

## ❖ Software

The programs and applications used with the physical computer to perform some tasks on computer system.

# Hardware Components

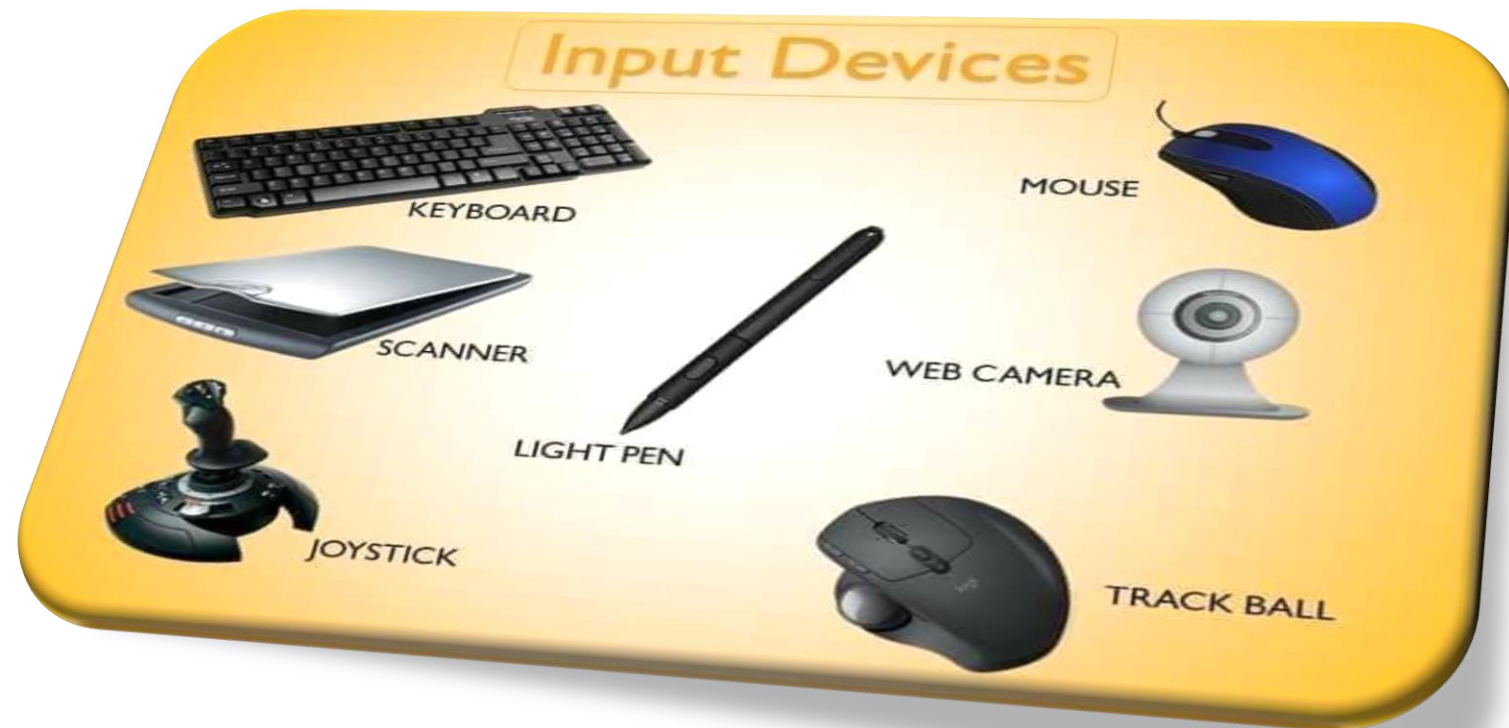

The major hardware components of a computer system are:

- ❖ Input devices.
- ❖ Output devices.
- ❖ Processor (CPU).
- ❖ Memory (Storage Device).

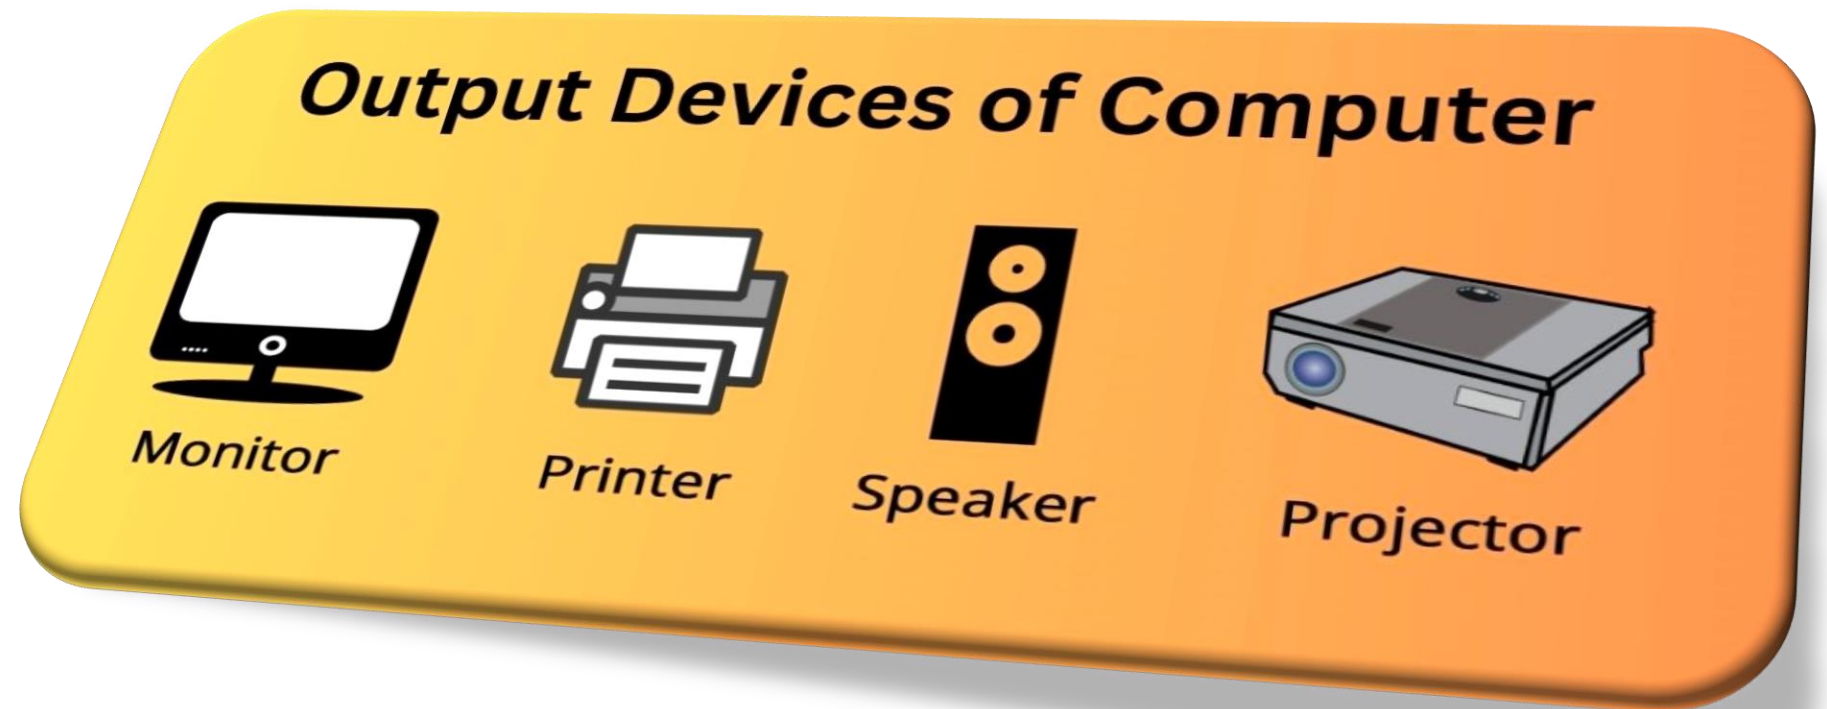

# Input Devices

Input Devices are any electronic device that are connected to a computer to allow the user to input (insert) data to the computer.

# Output Devices

- Output Devices: allow the user to output (display or print) information from the computer.
