

# List of Contents

## Lecture 1

- 1.1. General molecular biology
- 1.2. Nucleic Acid
- 1.3. Structure of DNA
- 1.4. Structure of RNA
- 1.5. Type of RNA molecule

## Lecture 2

- 2.1. DNA replication theories
- 2.2. DNA replication (Semiconservative method)
- 2.3. DNA Damage and Repair System

## Lecture 3

- 3.1. RNA polymerase Enzyme
- 3.2. Transcription Process (RNA synthesis)
- 3.3. Post transcriptional modification of RNA (RNA processing)

## Lecture 4

- 4.1. Genetic code
- 4.2. Wobble Hypothesis
- 4.3. Translation process (Protein synthesis)
- 4.4. Post Translation modification of Protein

## Lecture 5

- 5.1. Gene Expression Regulation
- 5.2. Prokaryote Gene Regulation
- 5.3. Strategy of Gene Regulation
- 5.4. Induction and Repression
- 5.5. Operon
- 5.6. Lac operon
- 5.7. Trp Operon

## **Lecture 6**

- 6.1. Mutation
- 6.2. Processes of Mutation
- 6.3. Classification of Mutation

## **Lecture 7**

- 7.1. Gene transfer in Bacteria
- 7.2. Plasmids
- 7.3. Conjugation
- 7.4. Transformation
- 7.5. Transduction

## **Lecture 8**

- 8.1 Cancer
- 8.2. Causes of Cancer
- 8.3. Stage of Cancer
- 8.4. Proto-Oncogene
- 8.5. Oncogene
- 8.6. Tumor suppressor genes
