

Hyponymy is different from the meaning relation between a whole- and its parts. Discuss

Hyponymy is based on the concept of (class membership) and co-hyponyms are members of the class named by the superordinate. Hyponyms in this relation are different kinds not different parts. As an example : roses , lilies are different kinds and not different parts of flowers (the superordinate). It is a meaning relationship that is based on the concept of (kind of) not (part of).As opposed to this; the meaning relationship that the word (body) has with words like (ear, .nose, leg) is that of (whole-part) relationship
