

Continuity

الاستمرارية

Definition:

A function f is said to be continuous at a if and only if the following conditions are satisfying:

- 1- $f(a)$ exists
- 2- $\lim_{x \rightarrow a} f(x)$ exists
- 3- $\lim_{x \rightarrow a} f(x) = f(a)$

يمكن ان نعرف الاستمرارية لدالة معينة هندسياً (بأن الدالة f مستمرة اذا لا يوجد قطع في بيان الدالة)

Example:

Let $f(x) = \begin{cases} x^2 - 2 & ,if \ x \geq 2 \\ x & ,if \ x < 2 \end{cases}$, is $f(x)$ continuous at $x = 2$

Solution:

1. $f(a)$ exists

To find $f(2) = (2)^2 - 2 = 2$

- 2- $\lim_{x \rightarrow a} f(x)$ exists

Right side

$$\begin{aligned} \lim_{x \rightarrow 2^+} f(x) &= \lim_{x \rightarrow 2^+} (x^2 - 2) \\ &= 4 - 2 = 2 = L_1 \end{aligned}$$

Left side

$$\begin{aligned}\lim_{x \rightarrow 2^-} f(x) &= \lim_{x \rightarrow 2^-} (x) \\ &= 2 = L_2\end{aligned}$$

Thus $\lim_{x \rightarrow 2} f(x) = 2$

3- since $\lim_{x \rightarrow 2} f(x) = f(2) = 2$

Thus, f is continuous at $x = 2$

Example

$f(x) = |x|$, is $f(x)$ is cont. at $x = 0$

Solution:

$$|x| = \begin{cases} x & ,x \geq 0 \\ -x & ,x < 0 \end{cases}$$

1. $f(a)$ exists, $f(0) = 0$

2. $\lim_{x \rightarrow a} f(x)$ exists

Right side

$$\lim_{x \rightarrow 0^+} f(x) = \lim_{x \rightarrow 0^+} (x) = 0$$

Left side

$$\lim_{x \rightarrow 0^-} f(x) = \lim_{x \rightarrow 0^-} (-x) = 0$$

$$\lim_{x \rightarrow 0} |x| = 0$$

3- since $\lim_{x \rightarrow 0} f(x) = f(0) = 0$

Thus, f is continuous at $x = 0$

Example

Determine whether $f(x) = \begin{cases} \frac{x^2-25}{x-5} & , \text{ if } x \neq 5 \\ 8 & , \text{ if } x = 5 \end{cases}$ is

continuous at $x = 5$?

Solution:

1. $f(a)$ exists, $f(5) = 8$

2. $\lim_{x \rightarrow a} f(x)$ exists

$$\lim_{x \rightarrow 5} f(x) = \lim_{x \rightarrow 5} \frac{x^2 - 25}{x - 5}$$

$$= \lim_{x \rightarrow 5} \frac{(x - 5)(x + 5)}{(x - 5)}$$

$$= \lim_{x \rightarrow 5} (x + 5) = 10$$

3. $\lim_{x \rightarrow 5} f(x) \neq f(5)$, therefore $f(x)$ is not cont.
at $x = 5$

Example

Determine whether $f(x) = \begin{cases} 2^x & , \text{ if } x \neq -1 \\ 3 & , \text{ if } x = -1 \end{cases}$ is
continuous at $x = -1$?

Solution:

1- $f(a)$ exists, $f(-1) = 3$

3.2- $\lim_{x \rightarrow a} f(x)$ exists

Right side

$$\lim_{x \rightarrow -1^+} f(x) = \lim_{x \rightarrow -1^+} (2^x) = 2^{-1} = \frac{1}{2}$$

Left side

$$\lim_{x \rightarrow -1^-} f(x) = \lim_{x \rightarrow -1^-} (2^x) = 2^{-1} = \frac{1}{2}$$

$$\lim_{x \rightarrow -1^-} f(x) = \lim_{x \rightarrow -1^+} f(x) = \frac{1}{2}$$

3- $f(-1) \neq \lim_{x \rightarrow -1} f(x) = \frac{1}{2}$, therefore $f(x)$ is not cont.

at $x = -1$

Example:

Let $f(x) = \begin{cases} 4-x & ,if \ x < 0 \\ x^2 & ,if \ x \geq 0 \end{cases}$, is $f(x)$ continuous at $x = 4$

Solution:

1. $f(a)$ exists

To find $f(4) = (4)^2 = 16$

2- $\lim_{x \rightarrow a} f(x)$ exists

$$\lim_{x \rightarrow 4} f(x) = \lim_{x \rightarrow 4} (x^2) = 4^2 = 16$$

$\therefore f(4) = \lim_{x \rightarrow 4} f(x) = 16$

Thus, f is continuous at $x = 4$

Homework

1- Let $f(x) = \frac{x^2-25}{x+5}$, find $\lim_{x \rightarrow -5} f(x)$

2- what value should be assigned to b to make the function

$$h(x) = \begin{cases} x^3 & ,x < \frac{1}{2} \\ b x^2 & ,x \geq \frac{1}{2} \end{cases} \text{ is continuous at } x = \frac{1}{2}$$

3- is the function $f(x) = \begin{cases} 4-x & ,0 \leq x \leq 3 \\ 3 & ,3 < x \leq 5 \end{cases}$ cont.

1- at $x = 0$, 2- at $x = 2$ 3- at $x = 3$ 4- at $x = 5$

4- let $f(x) = \begin{cases} k & ,if x=2 \\ \frac{x^2-4}{x-2} & ,if x \neq 2 \end{cases}$,

Find k , such that f is cont. at $x = 2$

5- let $f(x) = \begin{cases} \frac{\sin 4x}{3x} & ,if x \neq 0 \\ h & ,if x = 0 \end{cases}$,

if f is cont. at $x = 0$, find h
