## **Abstract**

The research aims at explaining the nature of the relationship between privatization and unemployment in some developing economies through the general indications of that relationship and its effect on unemployment for the period of the study(1990-2005).

Which is represented by:

- 1-The Gross domestic production.
- 2-The Government expenditure.
- 3-The Direct foreign investment.

And the application of these variables in econometrics practical model in the Chosen countries to know the effect of the economic relationship between the independence variables and the unemployment dependence variable for the mentioned period. The study included the hypothesis that the relationship between privatization and unemployment is not inverse in the short run and inverted in the long run through the effect of the variables that govern the effectiveness of programs for reforming economy in the long run.

The reach to study aim divided the research to three chapters

The first chapter discusses unemployment history and idea theoretically.

The second part studied the theoretical data of unemployment.

The last part deal with the natural unemployment and trends

The second section under takes to clarify privatization theoretically through four parts, the first part explains privatization, its history and concept.

The second parts deals with the forms and techniques.

The third part discusses the causes and aims of privatization.

The fourth part deals with general implications of the relationship between privatization and unemployment.

The third section deals with the economic view of privatization and its effects on unemployment in chosen countries.

The first part discusses the economic view of the experiences of the chosen specimen.

The second part deals with the practical side in measuring and analysing the relationship between privatization and unemployment in the developing economies.

Finally there was some suggested and recommendations.
